Presentation

## Alexandre Vigny

- $\rightarrow$  31 years old, born in 1992.
- $\rightarrow$  PhD defense September 2018 (5 years ago).
- $\rightarrow$  Living in Bremen, Germany.
- → Master in University Paris Diderot, 2015.
  Logique Mathématique et Fondement de l'Informatique (LMFI).
- → PhD in University Paris Diderot. (3 years)
  With Arnaud Durand & Luc Segoufin
- → Post-doc in Warsaw. (1 year) With Szymon Toruńczyk & Mikołaj Bojańczyk
- → Post-doc in Bremen. (3 years)
  With Sebastian Siebertz

# Summary

### Area of Research

- → Graph theory
- → Logic
- → Distributed computing

## Highlights

- → Publication in J.ACM
- → 2 Upcoming journal papers
- → 9 Conference papers
- → Co-organizer of a workshop

PODC-DARe: Distributed Algorithms on

REalistic network models

# Summary

#### Area of Research

- → Graph theory
- → Logic
- $\rightarrow$  Distributed computing

#### Highlights

- → Publication in J.ACM
- → 2 Upcoming journal papers
- → 9 Conference papers
- ightarrow Co-organizer of a workshop

PODC-DARe: Distributed Algorithms on

REalistic network models

#### **Teaching**

- $\rightarrow$  In Paris (3 years)  $\sim$  180h
- $\rightarrow$  In Bremen (3 years)  $\sim 270 \text{h}$

### Highlights

- → Creation of syllabuses
- → Responsible for two courses
- → All level bachelor to master
- → Both in French and English

## Algorithmic graph theory

Given a graph G and a property P: "Does G satisfy P?"

 $\rightarrow$  Is G planar?

## Algorithmic graph theory

Given a graph G and a property P: "Does G satisfy P?"

- $\rightarrow$  Is G planar?
- $\rightarrow$  Does G have a k-dominating set?

Given a graph G and a property P: "Does G satisfy P?"

- $\rightarrow$  Is G planar?
- $\rightarrow$  Does G have a k-dominating set?
- $\rightarrow$  Is G connected?

**Goal**: Efficient algorithms ...

... at least for restricted graph classes and/or simple properties.

## Logic

### First-order (FO) logic

- $\rightarrow$  Can express k-independent set: There are k vertices, that are not adjacent  $\exists x_1 \ldots \exists x_k \bigwedge_{i < i} (\neg E(x_i, x_j) \land x_i \neq x_j)$
- → Cannot express : connectivity, planarity, 2-colorability, ...

# Logic

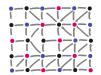

### First-order (FO) logic

- $\rightarrow$  Can express k-independent set: There are k vertices, that are not adjacent  $\exists x_1 \ldots \exists x_k \ \bigwedge_{i < i} (\neg E(x_i, x_j) \land x_i \neq x_j)$
- $\rightarrow$  Cannot express : connectivity, planarity, 2-colorability, ...

### Monadic second-order (MSO) logic

- $\rightarrow$  More general than FO
- → Can express : 3-colorability:  $\exists X_1 \exists X_2 \exists X_3 \ (\forall x \bigvee_{i < 3} x \in X_i) \land (\forall x \forall y \ E(x, y) \rightarrow \bigwedge_{i < 3} (x \notin X_i \lor y \notin X_i))$

## Distributed computing

### **Distributed Computing: Local model**

- → Different notion of efficient
- → Time needed VS Information needed

## Distributed computing

### **Distributed Computing: Local model**

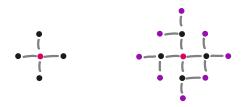

- → Different notion of efficient
- → Time needed VS Information needed

## Distributed computing

#### **Distributed Computing: Local model**

- → Different notion of efficient
- → Time needed VS Information needed

### **Distributed Computing: Local model**

- → Different notion of efficient
- → Time needed VS Information needed

→ Can you decide locally?

## Logic & Meta theorems

Problems can be expressed in logic. (FO, MSO,...)

The  $\mathcal{L}$ ,  $\mathcal{C}$  model-checking problem: Given  $\varphi \in \mathcal{L}$  and  $G \in \mathcal{C}$ , does  $G \models \varphi$ ?

Goal: fixed parameter tractable algorithms  $O(f(\varphi) \cdot |G|^c)$ 

Problems can be expressed in logic. (FO, MSO,...)

The  $\mathcal{L}$ ,  $\mathcal{C}$  model-checking problem: Given  $\varphi \in \mathcal{L}$  and  $G \in \mathcal{C}$ , does  $G \models \varphi$ ?

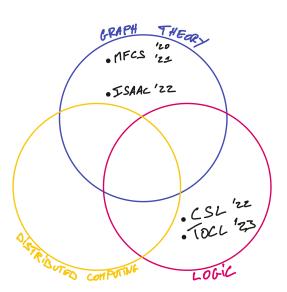

Goal: fixed parameter tractable algorithms  $O(f(\varphi) \cdot |G|^c)$ 

### Courcelle's Theorem (1990):

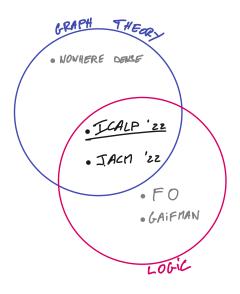

for  $\varphi \in MSO$  and treewidth  $(G) \leq k$ , in time  $O(f(\varphi, k) \cdot |G|)$ 

→ Generalize many known results, ex: Arnborg, Proskurowski 1989: independent sets, dominating sets, graph coloring, Hamiltonian, ... are linear on partial k-tree.

## Result overview

### Result overview

#### · ENUMERATION FO QUERIES

-> PODS 2018 SAC11 2022

#### Result overview

#### · ENUMERATION FO QUERIES

-> PODS 2018 SACH 2022

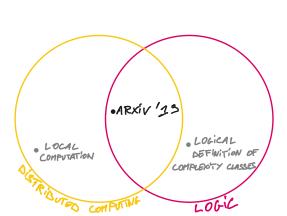

# • DISTRIBUTED DOMINATION ON SPARSE GRAPH CLASSES

ON SPARSE GRAPH CLASSES

-> SÍROCCO ZOZZ/ZOZZ

-> EUR. J. COMB.

(TO APPEAR)

#### · ENUMERATION FO QUERIES

# DISTRIBUTED DOMINATION ON SPARSE GRAPH CLASSES

-> SIROCCO ZOZZ/ZOZZ

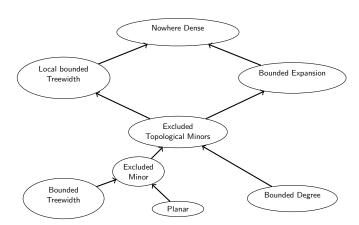

-> EUR. J. COMB.

PARAMETERIZED DISTRIBUTED COMPLEXITY THEORY:

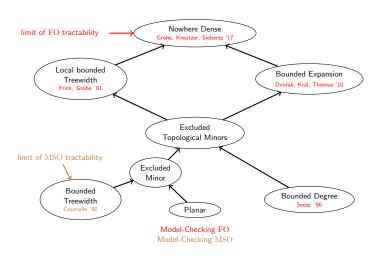

A LOGICAL APPROACH

-> ARXIV

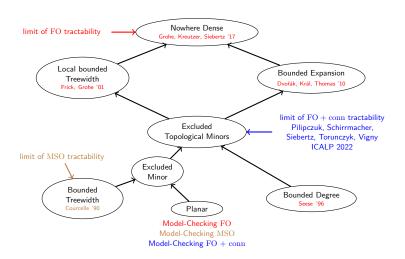

GENERALITY

GENERALITY

GENERALITY

#### FO + conn

Focus 0000

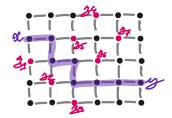

Schirrmacher, Siebertz, Vigny '21 and Bojanczyk '21

### **Syntax**

 $\rightarrow$  Uses: FO and conn<sub>k</sub> $(x, y, z_1, \dots, z_k)$ 

#### Meaning

 $\rightarrow x$  and y are connected after the deletion of  $z_1, \ldots, z_k$ .

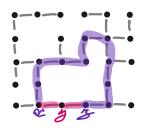

## Expressive power of FO + conn

→ connectivity

$$\forall x \forall y \text{ conn}_0(x, y)$$

→ cycle

$$\varphi_{cycle} := \exists x \exists y \exists z (E(x,y) \land E(y,z) \land z \neq x \land conn_1(z,x,y))$$

→ Not expressible planarity, bipartiteness, Hamiltonicity, ...

#### Main result

## Theorem: Pilipczuk, Schirrmacher, Siebertz, Torunczyk, Vigny

- $\rightarrow$  Model-checking for properties in FO + conn over graph classes excluding a topological minor is solvable in time FPT.
- → Model-checking is not FPT for more general graph classes. Under complexity assumptions

# Research project

First (short term) goal: new logics

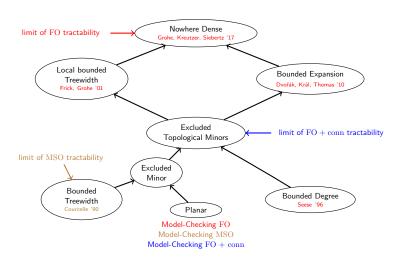

### **Beyond** FO + conn

- → What can be added?
- → What do we want to express?
- ightarrow Example: a path of even length, using only blue nodes, ...

Keeping in mind algorithmic applications

DENSITY

## Characterization of graph classes

#### Direction on edges

- → More general
- → Problems are harder E.g. Directed Dominating Set is NP-complet on DAGs
- → Some problems do not care about orientation

#### Reconfiguration problems

- → No need to find a set
- → Here, the orientation matters!

## Distributed computing & Certification

#### Local computing

- → Other notion of efficient
- → Still looking for meta theorems

#### **Complexity classes**

- → Hard problems may not be equally hard
- ightarrow Define complexity classes through logic

#### **Compact certification**

- → Feuilloley, Bousquet, Pierron What Can Be Certified Compactly? Compact local certification of MSO properties in tree-like graphs. In PODC'22
- → Fraigniaud, Montealegre, Rapaport, Todinca A Meta-Theorem for Distributed Certification. In SIROCCO'22

## Axe MAAD : Modèles et Algorithmes de l'Aide à la Décision Algorithmics, Graphs, Complexity

- → M. Kanté, JF. Raymont, L. Nourine, B. Guillon
- → Workshop Generalized coloring numbers (JF. Raymont)
- → ANR GraphEn (M. Kanté, L. Nourine)
- → Create a logic working group with B. Guillon and M. Kanté
- → Distributed computing is new.
- → Compact certification vs Labelling scheme (M. Kanté)

## Past teaching in Paris

#### Around 180h

- → Mainly Bachelor level
- → Similar to topics in ISIMA

Subject	Years	Level	Activity
Initiation à la Programmation	2015-2016	L1	TP
Langages et Automates	2015-2016	L2	TD
Éléments d'Algorithmique	2016-2017	L2	TD
Base de données	2016-2017 2017-2018	L3 M1	TP & TD
Concepts Informatique	2017-2018	L1	TD

## Past teaching in Bremen

#### Around 250h

- → Master level
- → Creation of syllabuses
- → Fully in charge of a lecture

Subject	Years	Level	Activity
Finite Model Theory	2019-2020	Master	TD
Sparsity	2019-2020	Master	TD
Parametrized Complexity	2019-2020	Master	TD
Set and Model Theory	2020-2021	Master	TD
Databases, Graphs, Algorithms	2020-2021 2021-2022	Master	Cours & TD
Set and Model Theory	2021-2022	Master	Cours & TD

## Highlight

### Various settings

- → In French, in English
- → All levels
- → Physical and remote

#### Various responsibilities

- → Creation of the content
- $\rightarrow$  Fully in charge of a lecture

#### **Takeaway**

- $\rightarrow$  Polls
- → Online white boards

#### **Future**

#### Possible lectures

- → Most introductory lectures
- → Système de gestion de base de données
- → Willing to learn new theme
- $\rightarrow \dots$

#### **Future**

#### Possible lectures

- → Most introductory lectures
- → Système de gestion de base de données
- → Willing to learn new theme
- $\rightarrow \dots$

#### Responsibilities

- → Responsable d'années
- $\rightarrow$  Stages
- $\rightarrow$  ..

# Thank you!

- → 2019-2023: Postdoc, University of Bremen. With Sebastian Siebertz
- → 2018-2019: Postdoc, University of Warsaw. With Szymon Toruńczyk & Mikołaj Bojańczyk
- → 2015-2018: Thesis, University Paris Diderot. With Arnaud Durand & Luc Segoufin

#### Info:

- → 1 Journal: J.ACM (TOCL & Eur. J. Comb. to appear)
- → 9 Conferences: ICDT, PODS, MFCSx2, SIROCCOx2, ISSAC, CSL, ICALP.
- → 1 Workshop (co-organizer): https://podc-dare.github.io/.
- → 1 Popularization: La gazette du GDR-IM.
